## WORK EXPERIENCE

### Software developer Associate Mechlin Softwares Pvt. Ltd.

01/2023 - 05/2024

*Collaborated with cross-functional teams to ensure seamless integration of front-end and back-end components, delivering fully functional web applications. Used HTML, CSS, Reactjs and Nodejs to develop app solutions. Increased website performance by optimizing front-end and back-end code for faster loading times. Created easy-to-use APIs for third-party integrations, enhancing the functionality of existing applications without compromising on performance or security.*

### Full Stack Trainee Function-up

07/2022 - 01/2023

*During my six-month intensive training in front-end development, I acquired a solid foundation in key technologies and methodologies essential for building captivating and functional web interfaces. I delved into HTML, CSS, React, and JavaScript mastering the art of structuring and styling web pages to deliver optimal user experiences.*

### Technical Support Engineer Tech-Horizon

11/2021 - 07/2022

*As a Support Engineer at Tech-Horizon, I provided technical assistance and troubleshooting for clients, resolving both software and hardware issues. I collaborated with development teams to address and fix bugs, ensuring smooth and efficient operations. My role involved delivering excellent customer service, documenting common issues, and contributing to the improvement of future solutions.*

Next.js

AWS

MySQL

## PERSONAL PROJECTS

### Film Review App (04/2024 - 04/2024) [🔗](#)

- The Movie Review App is a web application built with ReactJS, offering a platform for users to review and rate movies. It features an OTP-based login/signup system using Firebase Authentication and utilizes the Firebase database to store movie information, ratings, and reviews.
- Technology Used: Redux, Redux toolkit, React-icons, Reactjs, JS, CSS, Firebase.

### Restaurant-API (05/2024 - 05/2024) [🔗](#)

- This project aims to create a backend application for an online restaurant food ordering system, with features like author and blog management, authentication, authorization, and thorough testing using Postman.
- Technology Used: JavaScript, Node.js, Express.js, MongoDB, JWT

### Image-uploader (01/2024 - 01/2024) [🔗](#)

- This project is a full-stack application that allows users to upload images through a React front-end and stores them using an Express back-end with MongoDB.
- Technology Used - Reactjs, JavaScript, Node.js, Express.js, MongoDB, ShortId, Redis [🔗](#)

### Shopping Cart (06/2023 - 06/2023) [🔗](#)

- Developed a backend project APIs for user, product, order, and cart, like an E-Commerce website. Educated students on product information and value. Communicated with parents to ensure comprehension of product merits.
- Technology used - JavaScript, Node.js, Express.js, MongoDB, JWT
